

Circle by Swasth

Complete Product and UI Audit

An evidence-led review of the currently implemented Arjun Mehra and Savita Mehra account experiences.

AUDIT DATE

13 July 2026

RUNTIME

Expo 57.0.4 / React Native 0.86.0

DEVICE

iPhone 16e simulator / iOS 26.0 / 390 x 844 pt

SOURCE

master @ d67f118

Audit scope

Product audit only. No application source files were redesigned or modified. Findings describe the app rendered through Expo Go and the inspected local implementation.

Table of contents

SECTION	PAGES
Executive summary and scorecards	4-5
Application structure	6
Arjun account audit	7-16
Savita account audit	17-25
Account switching	26
Complete screen inventory	27-29
Functional audit	30-31
UI consistency	32
Accessibility and senior usability	33-34
Seeded-data accuracy	35
Prioritised issue list	36-38
Recommended next UI pass	39
Release readiness and verification	40

Reading the evidence

Screenshot captions use Axx for Arjun, Sxx for Savita and Xxx for cross-account evidence. The blue gear visible in many images is an Expo Go developer overlay and is itself an audited defect in the preview environment.

Audit method and evidence limits

OBSERVED RUNTIME

App launched through Expo Go on one consistently sized iPhone 16e simulator. Status bar was standardised to 9:41.

INTERACTION METHOD

Native XCUITest accessibility automation plus route-level navigation and rendered screenshot capture.

SOURCE CORROBORATION

Routes, local state, seed data, labels, accessibility props and action handlers were inspected to distinguish real flows from visual-only affordances.

BUILD CHECKS

TypeScript, Expo lint and iOS Expo export all completed successfully during the audit. No test script is defined.

Interpretation rules

- **Working** means the primary local interaction completed and gave a visible result.
- **Partially working** means a local simulation exists but the promised real-world capability, persistence or integration does not.
- **Placeholder** means the route or control largely resolves to generic demo content.
- **Broken** means the rendered control could not be reliably used in the audited runtime.
- This review does not claim backend, clinical, privacy, security or accessibility certification.

Important runtime condition

The persistent blue Expo Go gear sits above the React Native surface. It obscures top-right controls and intercepted at least one automated tap on Arjun task creation. This is not found in the repository render tree, but it is part of the actual preview the product team sees.

A coherent prototype, not a launch-ready product

Circle has a substantial, navigable local prototype: two role-specific accounts, family profiles, health records, tasks, goals, AI-shaped guidance, care discovery, bookings and seeded sharing events. The visual foundation is warm and recognisable. Savita's presentation is meaningfully simpler than Arjun's.

WHAT WORKS WELL

Consistent warm palette, credible profile imagery, broad route coverage, clear account sheet, explicit upload and booking success states, and a good role-specific Savita vocabulary.

MOST SERIOUS GAPS

No durable persistence, Expo Go overlay blocking controls, provider-name conflicts, settings count mismatches, demo-only upload/voice/AI behaviours and incomplete validation of accessibility at 200% text.

ARJUN READINESS

Useful for a guided stakeholder demo. Too dense and locally simulated for unsupervised family use; some high-value controls compete with the debug overlay.

SAVITA READINESS

Conceptually strong and easier to understand. Still too tall on Home, exposes a five-item tab bar, and contains misleading real-world affordances such as camera, microphone and booking that are seeded simulations.

Overall readiness: 5.3 / 10

Suitable for controlled product demonstrations and design validation. Not ready for production, clinical reliance or privacy-sensitive family use.

Account readiness scores

Arjun Mehra

DIMENSION	SCORE	REASON
Visual quality	7/10	Warm, polished cards; density, clipping and overlay reduce finish.
Ease of use	6/10	Broad capabilities but many entry points and long screens.
Navigation	7/10	Four tabs plus quick add are learnable; deep route coverage is strong.
Completeness	6/10	Most surfaces exist; many actions are local/demo simulations.
Accessibility	5/10	Good labels and contrast tokens; some 44 pt targets and scaling risk.
Product coherence	6/10	Strong family concept; role labels and data counts conflict.

6.2 / 10

Savita Mehra

DIMENSION	SCORE	REASON
Visual quality	7/10	Clear type and calm surfaces; Home is very tall and gear intrudes.
Ease of use	7/10	Plain language and large controls; too many destinations remain.
Navigation	6/10	Role labels improve, but five bottom actions burden a senior flow.
Completeness	6/10	Task, upload, AI, sharing and booking demos run locally.
Accessibility	6/10	18 pt body, 48 pt controls and options help; scaling is custom, not full.
Product coherence	6/10	Personal framing works; Vikram/Arvind mismatch damages trust.

6.3 / 10

Roles, tabs and shared state

Active account

Arjun: Family Organiser

Savita: Personal Account

central in-memory AppState

Shared mutations

tasks

records

bookings

notifications

AREA	ARJUN	SAVITA	SHARED IMPLEMENTATION
Home	Family overview, member selector, updates, tasks, care, goal	Today, My health, Ask Circle, next appointment	Same root route; presentation selected by active account
Circle AI	Family/member context and dense suggestions	Short prompts, personal wording, share action	Rule-based seeded responses and local actions
Care	Family marketplace and bookings	Simplified recommendations and 4-step booking	Same provider/booking datasets
Settings	Family administration and data areas	Accessibility, help, sharing and reminders	Same account switch component and state
Persistence	Session only	Session only	No durable active-account or mutation persistence

Navigation reset

Switching replaces the stack with Home and updates tab labels/content. This worked in both directions. A full Expo Go process restart restored defaults, demonstrating that session state is not durable.

Family overview: visually strong, vertically heavy

A01 - Arjun Home top.

A02 - Home after one scroll.

A03 - Lower Home content.

PURPOSE

Summarises family attention items, recent updates, tasks, care and goal progress.

WORKS

Warm visual language; profile photos and family framing read immediately; Family Pulse copy is calm.

CONFUSING

Savita starts off-screen in the family selector, an update truncates, and the page needs several scrolls to reveal its promised overview.

PRIORITY

P1: remove the preview overlay. P2: tighten vertical rhythm and preserve complete labels.

Family navigation and profiles

A04 - Arjun member profile.

A05 - Rajiv member profile.

A06 - Neha member profile.

A07 - Savita member profile.

WORKS

Profiles consistently expose Overview, Health, Records and Care. Human photos materially improve recognition.

HIERARCHY

Identity, sync status and goal are clear. Snapshot cards are readable but large, limiting information per viewport.

INTERACTION

Selector is horizontally scrollable and Savita is reachable, but her initial off-screen position reduces discoverability.

ACCESSIBILITY

Named member controls exist. Selected state is visible, though horizontal scrolling remains essential for one family member.

Metrics and trends

A08 - Arjun sleep metric.

A09 - Rajiv HbA1c trend.

WORKS

Plain interpretation accompanies values, trend context is visible and routes are stable.

RISK

Charts are illustrative seeded visuals. There is no provenance, refresh timestamp detail or real source integration beyond labels.

VISUAL HIERARCHY

Value and interpretation dominate appropriately; the metric pages avoid dashboard overload.

PRIORITY

P2: make source, date and units consistently explicit; preserve the calm layout.

Useful controls compromised by preview conditions

A10 - Family tasks.

A11 - Family and individual goals.

A12 - Expo Go menu opened when the top-right Create area was exercised.

TASKS

Today, Upcoming and Completed views, member filters, task sheets, complete/reopen and local creation handlers exist.

GOALS

Family and individual progress are understandable, but changes remain local and reset with the app process.

OBSERVED PROBLEM

The large Expo Go gear overlaps the Create control and intercepted the audited interaction. The customer-facing preview is therefore not reliably operable.

PRIORITY

P1: audit using a development build without Expo Go UI. P2: reduce filter clipping and expose confirmation consistently.

Record vault and comparison

A13 - Family record vault.

A14 - Rajiv diabetes report comparison.

WORKS

Member/type filtering, searchable records and direct record routes are implemented. Comparison gives a useful before/after narrative.

SAFETY

AI-style explanations should distinguish source facts from generated interpretation and always expose document provenance.

CONFUSING

Settings says 14 records while the seeded dataset contains 27. That discrepancy undermines confidence in the vault.

PRIORITY

P1 for count/data consistency; P2 for provenance and empty/error states.

Medications and family calendar

A15 - Medication adherence.

A16 - Family calendar.

WORKS

Medication taken/not-taken state and adherence summaries are interactive in local state. Calendar aggregates tasks, appointments and care.

INTERACTION

Calendar is readable but dense; medication tap controls need explicit confirmation and stronger temporal context.

DATA ISSUE

Settings reports 9 active medicines while the seed contains 12 active medicines.

PRIORITY

P1: reconcile counts. P2: add robust undo and timestamp feedback.

Insights, notifications and Medical ID

A17 - Insights.

A18 - Notifications.

A19 - Emergency / Medical ID.

WORKS

Notifications group events and deep-link metadata exists. Medical ID consolidates essential details.

CLARITY

Insights mix clinical and routine interpretations without a consistent confidence/provenance model.

ACCESSIBILITY

Notification bell on Arjun Home measures 44 x 44 pt in the native accessibility tree, below the requested 48 x 48 target.

PRIORITY

P1 for emergency data accuracy and provenance. P2 for target sizes and notification read-state feedback.

Strong demo narrative; simulated intelligence

A20 - Circle AI landing.

A21 - Seeded family summary response.

WORKS

Member context, typed composer, suggestions, actions and citations are represented. Direct prompt handoff returned a family summary and next actions.

VISUAL HIERARCHY

Landing screen has excessive empty space; suggestion labels truncate. Composer is visually dominant and clear.

INCOMPLETE

Responses are local rule-based text, not a live AI service. Upload is seeded, and clinical safeguards are copy rather than an evaluated system.

PRIORITY

P1: label demo behaviour honestly. P2: preserve full prompt labels and show source provenance consistently.

Marketplace, profile and booking

A22 - Family Care marketplace.

A23 - Arvind Nair profile.

A24 - Existing booking.

WORKS

Search, category filters, recommendations, provider pages, modes, price, ratings and booking routes are implemented.

COMPLETENESS

Booking and consultation state are seeded/local; payment, availability and provider verification are not real integrations.

CONFUSING

The profile image presents a woman while the provider is named Arvind Nair; this is a high-salience identity mismatch.

PRIORITY

P1: repair provider identity and appointment-name conflicts. P2: reduce marketplace density and clarify demo availability.

Broad administration with placeholder edges

WORKS

Account identity and switch row are prominent. Quick add exposes records, readings, medication, reminders and tasks.

PLACEHOLDER BEHAVIOUR

Several settings detail actions resolve to generic local confirmation rather than the named system operation.

TERMINOLOGY

Account role is Family Organiser, while Roles & permissions shows Care Captain. Both may be valid concepts, but their relationship is unexplained.

PRIORITY

P1: remove/disable non-real destructive and privacy controls. P2: align terminology and counts.

Personal Home is understandable but too tall

FIVE-SECOND UNDERSTANDING

Pass: greeting, task count and Today card are immediately legible.

READING BURDEN

Moderate. Large text helps, but one Today card occupies most of the first viewport and key help/appointment areas require multiple scrolls.

COMPETING ACTIONS

Three task actions plus five bottom-bar targets are visible. This is more choice than the simple account framing suggests.

PRIORITY

P2: compact Today without shrinking text; consider reducing persistent navigation choices for this role.

Completion feedback works; hierarchy is plain

S04 - Mobility task completed with text and icon.

S05 - Mobility task reopened.

S06 - Knee pain detail.

UNDERSTANDABLE

Yes. Tasks use familiar verbs, one supporting line and explicit Completed/Mark complete text.

FEEDBACK

Pass: completion is represented with icon, text and a live-region confirmation, not colour alone. Reopening also works.

TEXT/TAPS

Task rows are large and readable. The metric detail returns to denser product language than Home.

PRIORITY

P2: keep plain-language interpretation dominant on every Savita detail route.

Good language model for a senior-facing assistant

S07 - Ask Circle landing.

S08 - Uploaded report referenced in AI.

FIVE-SECOND UNDERSTANDING

Pass. The heading and suggested questions are direct and task-oriented.

RESPONSES

Short, direct and action-limited. Share with Arjun creates a local family event. The system remains rule-based demo logic.

VOICE UI

A labelled microphone control exists but triggers a seeded question; it is not speech recognition.

PRIORITY

P1: clearly disclose simulated voice/AI in demo builds. P2: validate reading order and spoken feedback on device.

A complete-looking flow with simulated acquisition

WORKS

Three clearly named choices, a large preview, Try again, Use this, success confirmation and AI handoff all render and mutate local records.

SENIOR USABILITY

High clarity and low choice burden. Success state is excellent.

INCOMPLETE

Take photo, Photos and File all lead to the same seeded document. No native picker, camera permission or actual file parsing occurs.

PRIORITY

P1: do not imply real acquisition until native pickers and failure handling exist.

Appointment and preparation are clear but inconsistent

S12 - Existing appointment details.

S13 - Get ready checklist.

UNDERSTANDABLE

Appointment time, home visit and preparation purpose are easy to scan.

PREPARATION

Concerns, medicines and seeded questions create a useful practical checklist.

CRITICAL INCONSISTENCY

Home, appointment and AI call the physiotherapist Vikram Nair, while marketplace/profile/booking data use Arvind Nair.

PRIORITY

P1: resolve provider identity everywhere before any external demo or user test.

Simplified marketplace retains professional detail

S14 - Savita Care marketplace.

S15 - Provider profile.

FIVE-SECOND UNDERSTANDING

Pass: search, categories and one recommendation dominate.

PROFILE ISSUE

Arvind Nair is represented by an apparently mismatched portrait; identity trust is damaged.

READING BURDEN

Moderate. Card includes language, mode, earliest time, price and rating; all useful but vertically expensive.

PRIORITY

P1 identity accuracy. P2 keep only the fields needed before opening the profile.

Four-step local booking succeeds

S16 - Choose service.

S17 - Choose time.

S18 - Review booking.

S19 - Confirmation.

WORKS

Service, mode, time, review and explicit confirmation completed. Radio roles and selected states are provided.

TAP TARGETS

Choice rows and primary buttons are generously sized.

INCOMPLETE

Availability and payment are seeded; confirmed booking is in memory only and uses a fixed 18 July date.

PRIORITY

P1: disclose demo booking and persist safely. P2: prevent controls from sitting at viewport edges.

Accessibility controls are prominent and usable

S20 - Savita Settings.

S21 - Larger text enabled.

S22 - What Arjun can see.

WORKS

Larger text, read aloud, reduce motion, high contrast, notification preferences and family-help areas exist.

SCALING CONCERN

Larger text applies a custom 10% increase, while base text allows system scaling to 200%. The audit did not establish a complete 200% no-clipping pass.

PRIVACY CLARITY

The sharing sheet is direct and readable, but it is informational; granular sharing controls are not implemented.

PRIORITY

P1: test real Dynamic Type and persist preferences. P2: turn sharing statements into true controls or label them as demo information.

Useful routes remain broader than the simple account

S23 - Records route under Savita. S24 - Medications route under Savita. S25 - Emergency information. S26 - Ask Arjun confirmation.

WORKS

Ask Arjun creates explicit confirmation and a notification visible in Arjun. Emergency details are reachable.

ROLE BOUNDARY

Direct routes still expose dense shared family-style records/medication screens. Normal navigation limits exposure, but route guards are not evident.

SAFETY

Emergency content must be treated as seeded demo information, never authoritative clinical data.

PRIORITY

P1: enforce role-aware route content/guards and verify all emergency data.

Switching works in-session; persistence does not

X02 - Arjun Settings.

X03 - Arjun selects Savita.

X04 - Savita Home after switch.

X05 - Savita selects Arjun.

X06 - Arjun Home restored.

X07 - Notifications after returning to Arjun.

VERIFICATION	RESULT	EVIDENCE
Correct name and role	Pass	Settings cards and switch sheet
Correct Home/tab presentation	Pass	X04 and X06
Stack reset	Pass	Returns to role Home
Mutations survive role switch	Pass	Shared notification/activity handler executed in the same central state
Durable process persistence	Fail	State provider is in-memory; process restart restores defaults
Information leakage	Partially working	Normal tabs differ, but shared direct routes remain reachable

Tabs and family routes

SCREEN	ROUTE	ACCOUNTS	ENTRY	REF	STATUS	MAJOR ISSUE	PRI.
Arjun Home	/	Arjun	Home tab	A01-A03	Working	Dense; gear overlay	P1
Savita Home	/	Savita	My Health tab	S01-S03	Working	Very tall	P2
Circle AI	/ai	Both	Tab / handoff	A20-A21, S07	Partially working	Rule-based demo	P1
Care	/care	Both	Care tab	A22, S14	Working	Seeded availability	P2
Settings	/settings	Both	Settings tab	A25, S20	Working	Local settings	P2
Member profile	/member/[id]	Arjun	Family selector	A04-A07	Working	Large cards	P2
Metric detail	/metric/[memberId]/[kind]	Both	Health card	A08-A09, S06	Working	Illustrative charts	P2
Tasks	/tasks	Arjun	Home / quick add	A10-A12	Partially working	Create obscured in preview	P1
Goals	/goals	Arjun	Home / profile	A11	Working	Session-only changes	P2

Records, routines and awareness routes

SCREEN	ROUTE	ACCOUNTS	ENTRY	REF	STATUS	MAJOR ISSUE	PRI.
Records	/records	Both/direct	Settings/profile	A13, S23	Working	Count mismatch; role density	P1
Record detail/compare	/record/[id]	Both	Record list/AI	A14	Working	Provenance weak	P2
Medications	/medications	Both/direct	Settings	A15, S24	Working	Count mismatch	P1
Calendar	/calendar	Arjun	Home/settings	A16	Working	Dense aggregation	P2
Insights	/insights	Arjun	Home	A17	Working	Confidence unclear	P2
Notifications	/notifications	Both	Header bell	A18, X07	Working	44pt bell on Arjun	P2
Emergency / Medical ID	/emergency	Both	Settings	A19, S25	Partially working	Seeded safety data	P1
Appointment prep	/appointment-prep/[id]	Savita	Get ready	S13	Working	Provider mismatch	P1
Consultation	/consultation/[id]	Arjun	Booking	A27	Partially working	Local simulated session	P2

Care, upload, quick actions and settings details

SCREEN	ROUTE	ACCOUNTS	ENTRY	REF	STATUS	MAJOR ISSUE	PRI.
Provider	/provider/[id]	Both	Care card	A23, S15	Working	Portrait/name mismatch	P1
Booking detail/new	/booking/[id]	Both	Provider / appointment	A24, S16-S19	Partially working	Seeded local booking	P1
Savita upload	/savita-upload	Savita	AI / Home	S09-S11	Partially working	No native acquisition	P1
Quick add	Tab overlay	Arjun	Centre plus	A26	Working	Seven choices; dense	P2
Quick-add detail	/quick-add/[kind]	Arjun	Quick add	A28	Placeholder	Seeded/generic forms	P2
Settings detail	/settings/[section]	Role-dependent	Settings rows	A25/S20	Placeholder	Generic local save	P1
Onboarding	/onboarding	Both/demo	Sign out / reset	-	Partially working	Mock sign-in only	P2
404 / unmatched	Expo Router	Both	Invalid URL	-	Working	Developer-oriented	P3

Screenshot references A27/A28 refer to the consultation and quick-upload captures illustrated elsewhere in this PDF's Arjun evidence set.

Family, health and assistant actions

TEST	RESULT	OBSERVED OUTCOME
Switch family members	Pass	All four profiles opened with correct identity data.
Complete and reopen Savita task	Pass	State and explicit confirmation changed both ways.
Create Arjun task	Partially working	Local handler exists; top Create was intercepted by Expo Go overlay in audited preview.
Update a goal	Partially working	Local goal mutation exists; no persistence/backend.
Search/filter records	Partially working	Controls and filtering logic exist; dataset count conflicts with Settings.
Open metric trends	Pass	Sleep and HbA1c routes rendered.
Medication adherence	Pass	Taken/not-taken local state and adherence UI present.
Circle AI prompts	Pass	Seeded prompt returned direct family summary.
AI citations/actions	Pass	Record/action routes are rendered and linked.
Upload document	Partially working	Three-step UI succeeds using one seeded document.
Share with Arjun	Pass	Notification/activity created and survived account switch.

Care, notifications and lifecycle

TEST	RESULT	OBSERVED OUTCOME
Search marketplace	Partially working	Local filtering exists; no provider service/backend.
Filter professionals	Pass	Horizontal categories change the local result set.
Open provider	Pass	Profile route opens with rating, languages, modes and price.
Create Savita booking	Pass	Four local steps completed with confirmation.
View booking/history	Pass	Existing and new local booking routes are represented.
Appointment preparation	Pass	Time, provider, concerns, medicines and questions render.
Notifications/deep links	Partially working	Local hrefs exist; exhaustive deep-link return paths were not reliable under the overlay.
Switch accounts repeatedly	Pass	Both directions reset to the correct Home presentation.
State across role switch	Pass	Share activity remained in central state.
State after process restart	Fail	No persistence layer; default state returns.
Demo reset	Partially working	Handler resets central state; destructive confirmation is absent.
TypeScript / lint / iOS export	Pass	All commands completed successfully.

A warm system with several trust-breaking exceptions

AREA	ASSESSMENT	FINDING
Typography	Mostly consistent	Clear hierarchy; some labels truncate and dense screens wrap awkwardly.
Spacing/radii	Consistent	Large radii and generous spacing feel premium but inflate screen length.
Colour/contrast	Strong tokens	Core text/accent pairs meet nominal AA contrast calculations.
Iconography	Mostly consistent	Segmented Circle AI mark is preserved; no Gemini sparkle in tab. A star appears as a generic matching icon.
Buttons	Inconsistent density	Savita uses large clear actions; Arjun mixes text links, pills and large cards.
Tab bar	Visually coherent	Five targets including quick add; overlay and labels compete on Savita.
Sheets/modals	Clear	Account and sharing sheets are good; generic Settings sheets are placeholder-like.
States	Uneven	Strong upload/booking success; sparse error/loading/empty-state evidence.
Debug controls	Critical exception	Expo Go blue gear floats above every major screen and can intercept taps.
Dark surfaces	Limited	Dark AI composer is focused rather than a black hero card.
Branding	Recognisable	Botanical family mark and segmented AI mark are distinct and consistent.

No unsupported visual claim

The audited Home no longer contains a black Family Pulse hero. The severe visual problem is the external blue development gear and its shadow, not an in-repository black dashboard card.

WCAG 2.2 AA-oriented product review

CHECK	RESULT	EVIDENCE / CONCERN
Normal text contrast	Pass	Token samples: secondary/background 5.33:1; blue/surface 5.42:1.
Large text contrast	Pass	Core palette exceeds 3:1.
Tap targets	Partially working	Many are 48+ pt; Arjun Home notification and detail back controls are 44 pt.
Dynamic Type	Partially working	Text permits 200% multiplier; complete clipping test not established.
Savita larger text	Pass	Local 10% preference changes typography without immediate top-screen clipping.
Labels/roles/states	Partially working	Many explicit labels and selected/checked states; coverage is not universal.
Reading order	Partially working	Logical JSX order; no complete VoiceOver rotor audit.
Colour-only status	Pass	Task state uses icon plus text; booking choices use icon/state.
Reduced motion	Partially working	Preference alters seeded AI timing; system preference integration not demonstrated.
Icon-only buttons	Partially working	Most labelled; Expo Go gear is external and disruptive.
Confirmation	Pass	Upload, booking, task and share actions give explicit feedback.
Formal certification	Not applicable	This is a product audit, not an accessibility certification.

Savita: understandable in five seconds, but not yet effortless

WHAT DO I NEED TO DO?

Answered immediately by the two-item count and Today card. Strongest part of the experience.

HOW AM I DOING?

My health interpretations are plain, but they sit below a very tall Today card.

WHEN IS MY NEXT APPOINTMENT?

Visible as the third Today row and later as a detailed card; duplicated provider naming is unsafe/confusing.

WHERE CAN I ASK FOR HELP?

Ask Circle is clear but below the fold; five bottom-bar actions still create choice burden.

Senior-specific observations

- **Language:** direct, familiar and generally free of abbreviations.
- **Reading burden:** short sentences, but excessive vertical scrolling separates related decisions.
- **Targets:** primary Savita controls are generally 48 pt or larger.
- **Feedback:** task, booking, upload and family-help confirmations are explicit.
- **Risk:** simulated camera, microphone and professional booking look real; an elderly user may not distinguish a demo.
- **Priority:** make capability truthfulness and provider identity correct before further visual polish.

Accuracy and consistency findings

FINDING	DISPLAYED STATES	IMPACT	SEVERITY
Provider name conflict	Vikram Nair on Savita Home/appointment/AI; Arvind Nair in provider and booking data	User may prepare for the wrong person	P1
Provider portrait conflict	Arvind Nair card/profile uses a portrait that appears inconsistent with the identity	Reduces marketplace trust	P1
Record count conflict	Settings: 14 records; seed: 27 records	Vault appears unreliable	P1
Medication count conflict	Settings: 9 active; seed: 12 active	Adherence overview appears unreliable	P1
Role terminology	Family Organiser vs Care Captain	Authority model is unclear	P2
Fixed dates	14/18 July 2026 and Today labels are hard seeded	Staleness appears quickly	P2
Uploaded report duplication	Every source creates Knee and Mobility Report	False acquisition semantics	P1
Account boundary	Savita can reach dense shared routes directly	Potential presentation leakage	P1
Names/initials	Core family names and profile photos are otherwise consistent	Positive baseline	-

P0 and P1 priorities

ID	ACCOUNT	SCREEN / PAGE	PROBLEM	IMPACT	SEVERITY	RECOMMENDATION	EFFORT
CIR-001	Both	All / pp.7-26	Expo Go gear overlays and intercepts controls	Blocks use; invalidates clean preview	P1	Audit/demo via dev build; remove Expo Go UI	S
CIR-002	Savita	Care/appointment / pp.21-23	Vikram vs Arvind provider mismatch	Wrong-person confusion	P1	Single canonical provider identity	S
CIR-003	Both	Provider / pp.15,22	Portrait appears inconsistent with Arvind identity	Trust and safety concern	P1	Correct verified portrait/identity	S
CIR-004	Both	State / pp.6,26	Account/mutations are not durable	Data vanishes after restart	P1	Persist versioned demo state securely	M
CIR-005	Both	Settings / pp.16,35	Record and medicine counts conflict with seed	Health summary appears unreliable	P1	Derive counts from one source	S
CIR-006	Savita	Upload / p.20	All acquisition choices use one seeded document	Misleading capability	P1	Real pickers or explicit demo labels	M
CIR-007	Both	AI / pp.14,19	AI/voice presented as real but rule-based	Over-trust risk	P1	Clear demo disclosure and safety layer	M
CIR-008	Savita	Direct routes / p.25	Role-specific presentation not enforced at route boundary	Information/presentation leakage	P1	Role-aware guards and adapters	M

P2 quality priorities

ID	ACCOUNT	SCREEN / PAGE	PROBLEM	IMPACT	SEVERITY	RECOMMENDATION	EFFORT
CIR-009	Arjun	Home / p.7	Overview requires several scrolls	Poor scanning	P2	Tighten cards and section rhythm	M
CIR-010	Arjun	Home / p.7	Update label truncates	Meaning lost	P2	Allow two lines or shorter copy	S
CIR-011	Arjun	Family / p.8	Savita starts off-screen	Low discoverability	P2	Edge cue and compact spacing	S
CIR-012	Both	Headers / p.33	Some controls are 44 x 44 pt	Missed taps	P2	Raise minimum to 48 x 48	S
CIR-013	Savita	Home / p.17	Today consumes first viewport	Help/health delayed	P2	Compact rows, preserve 18 pt text	M
CIR-014	Savita	Tab bar / p.17	Five persistent choices	Senior choice burden	P2	Validate reduced role navigation	M
CIR-015	Arjun	AI / p.14	Suggested prompts truncate	Intent unclear	P2	Use full-width/list prompts	S
CIR-016	Both	Settings / pp.16,24	Generic save sheets look functional	Confusing placeholder	P2	Implement or remove named action	M

P3 polish and enhancements

ID	ACCOUNT	AREA	PROBLEM	SEVERITY	RECOMMENDATION	EFFORT
CIR-017	Both	Empty/error states	Limited evidence and generic messaging	P3	Design role-specific empty/error states	M
CIR-018	Arjun	Calendar	High density on narrow screens	P3	Progressive disclosure	M
CIR-019	Both	Role labels	Care Captain relationship unclear	P3	Define role taxonomy in copy	S
CIR-020	Savita	Read aloud	No visible playback controls	P3	Add stop/replay and spoken status	M
CIR-021	Both	Data timestamps	Many labels use relative/fixed demo time	P3	Centralise deterministic demo clock	M
CIR-022	Both	Charts	Seeded visuals lack data provenance	P3	Source and update metadata	M
CIR-023	Both	Search	No substantial no-result recovery	P3	Helpful empty and clear-filter actions	S
CIR-024	Both	Brand polish	Some marks/shadows vary by context	P3	One icon/mark sizing matrix	S

No P0 identified

No observed flow exposed a confirmed serious safety or privacy breach. Several P1 issues could become safety/privacy concerns if the demo were mistaken for a production health product.

Refine the product; do not redesign it

Keep unchanged

- Warm off-white/pastel system and strong dark typography.
- Arjun family-management information architecture.
- Savita plain-language Today, My health, Ask Circle and next appointment structure.
- Botanical family mark, segmented Circle AI icon and real profile photos.
- Explicit task, upload and booking confirmations.

Arjun

- Remove preview overlay by using a development build.
- Reconcile record/medication counts and role terminology.
- Compact Home sections and preserve complete labels.
- Keep family selector scrollable but make the final member discoverable.
- Make AI prompts readable and label simulated intelligence.

Savita

- Fix provider identity everywhere first.
- Compact Today rows without reducing type or targets.
- Make camera, voice and booking truthfully reflect capability.
- Enforce personal presentation on every reachable route.
- Test 200% Dynamic Type, VoiceOver and TalkBack on physical devices.

Implementation order

1. Identity + seed integrity

2. Clean runtime + persistence

3. Capability truthfulness

4. Accessibility targets/scaling

5. Density and polish

6. Error/empty states

Readiness, evidence and final checks

CHECK	RESULT
Application launched successfully on iPhone 16e / iOS 26.0	Pass
Arjun and Savita both rendered and were interacted with	Pass
Switch Arjun -> Savita -> Arjun	Pass
Savita task complete/reopen, upload, share and booking	Pass
Arjun profiles, metrics, records, AI, Care and Settings inspected	Pass
TypeScript check	Pass
Expo lint	Pass
iOS Expo export through Metro	Pass
Project test suite	Not implemented
Formal WCAG certification	Not applicable
Application source modified by audit	No

Final assessment

The product is a visually promising, broad local prototype. Its next pass should prioritise integrity, persistence, role boundaries and truthful capability over another redesign. Once those are reliable, modest density and accessibility refinements can lift both accounts substantially.
